Angle Relationships

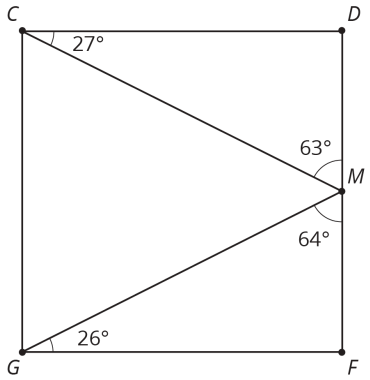

Grade 7 · Angles, Triangles, and Prisms

1. Angles A and C are supplementary. Find the measure of angle C.

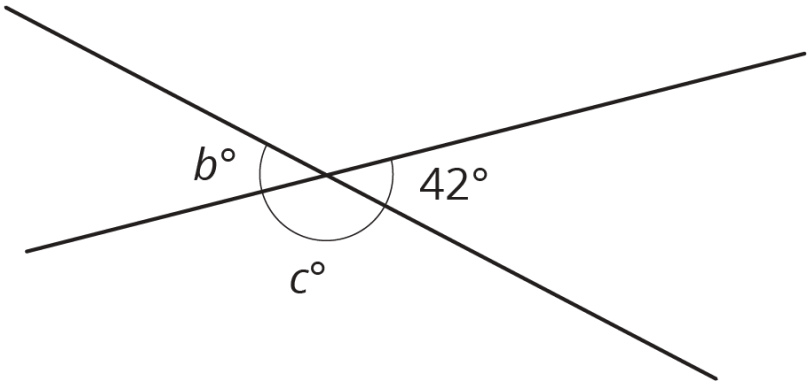

2. a. List two pairs of angles in square $CDFG$ that are complementary.

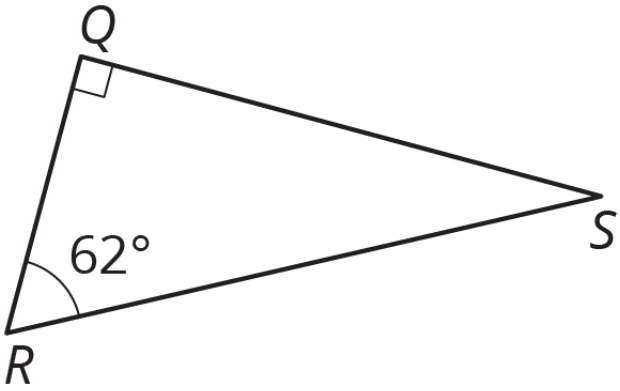

b. Name three angles that sum to $180°$.

3. Two lines intersect. Find the value of b and c.

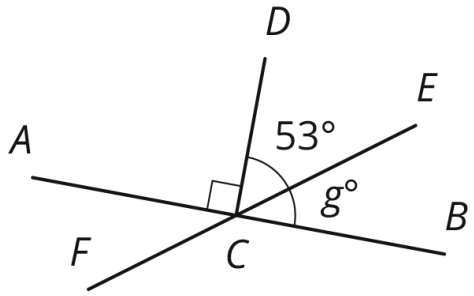

4. In this figure, angles R and S are complementary. Find the measure of angle S.

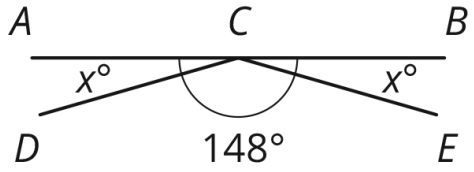

5. If two angles are both vertical and supplementary, can we determine the angles? Is it possible to be both vertical and complementary? If so, can you determine the angles? Explain how you know.

6. Segments AB, EF, and CD intersect at point C, and angle ACD is a right angle. Find the value of g.

7. Segments AB, DC, and EC intersect at point C. Angle DCE measures $148°$. Find the value of x.

8. Line ℓ is perpendicular to line m. Find the value of x and w.
